

**Innovation in Design: Towards a New Paradigm in Learning**  
**Wednesday 18<sup>th</sup> April 2007, 9.30-4.30**  
**Institute of Education**  
**20 Bedford Way WC1H 0AL**

This important conference, held jointly by the University and Stakeholder Design, will consider global innovations in learning. It is our response to a new urgency:

- A new curriculum.
- A reconstruction of key stage 4 and post compulsory qualifications.
- A new emphasis on personalised learning.
- New technological possibilities.
- New school building programmes.
- LSC uplift in capital funding.
- Globally there has been a seismic shift towards individualised learning.

It is vital that the opportunity to reconsider learning environments is seized now, before funds are committed to producing a replication of the past, and blunting our ability to deliver a world class education.

At this conference, internationally renowned speakers will be offering their perspectives on what needs to change and highlighting practical steps that we can take as we shape a 21<sup>st</sup> century paradigm. Keynote speakers include:

- Annika Small, Chief Executive of Futurelab, a renowned education think tank, on improving learning through better use of technology
- Paul Groom, of the world class South East Essex College, on student centred learning
- Sean McDougall, formerly of the Design Council and now MD of Stakeholder Design, on innovative approaches to the system of education
- Andrew Harrison, Director of Research at DEGW, a global educational architecture practice, on spaces for learning

The Institute of Education will mark the conference by unveiling new research findings, complete with illustrations and examples on a global scale. With workshops from groups including Young Black Positive Advocates, Richard Hunter of the Specialist Schools and Academies Trust and the staff and students of East Barnet School (Mission Possible), the conference will look at:

- Flair
- Access to technology
- How to make the best use of virtual learning environments
- Personalised learning
- Management of space
- Student tracking
- Interaction
- Supportive, safe environments
- Participation
- Developing cognitive processes
- Excellence.

The conference will be of vital interest to School and College managers, local authorities, designers and architects, and curriculum managers and teachers intending to explore the new technologies.
